3. Perform statistical analyses on ISSP dataset

| Perform correlation analysis and clustering on questionnaires answers to identify three dimensions of environmental concern:

-Belief in effectiveness of policies
-Awareness
-Will to make sacrifices | → | Build "environmental concern scores" corresponding to each environmental concern dimension and cluster countries based on average score

-Two clusters identified | → | Analyse distributions of environmental concern scores and country-wide indicators for the two clusters | → | Analyse effect of indicators on scores:

-Individual: effect size
-Country-wide: correlation |
